NARRATIVE

A. PROJECT DESCRIPTION

The Illinois Department of Transportation (IDOT) is preparing a Preliminary Engineering and Environmental Study (Phase 1) for the Interstate 55 (I-55) Managed Lanes Project. The project study area includes the I-55 corridor (Stevenson Expressway) from I-355 to I-90/94 at the east.

This project is proposed to add one managed lane in each direction within the existing median of the expressway. The term 'Managed Lanes' includes the implementation of travel lanes for High Occupancy Vehicle (HOV), High Occupancy Toll (HOT), Congestion Pricing, as well as other concepts to improve the overall flow of traffic. This project has been identified in the Chicago Metropolitan Area for Planning (CMAP) Go To 2040 Plan as a priority project.

This report requested by the Illinois Department of Transportation is to evaluate the existing culvert structure carrying Interstate 55 (Stevenson Expressway) over West Branch Sawmill Creek located in DuPage County, Illinois. The subject box culvert is a 5' (W) X 4' (H) single reinforced concrete box culvert located between Cass Avenue and Lemont Road and crosses I-55 approximately 2400 feet west of Cass Avenue. The total drainage area to the culvert is approximately 0.75 square miles. Refer to Exhibit 4.1 for a General Location map and Exhibit 4.2 for the USGS Hydraulic Atlas.

B. DESCRIPTION OF EXISTING STRUCTURE AND FLOODPLAIN

SITE DESCRIPTION

The upstream limit of the study is located approximately 1500' north of the I-55 crossing. West Branch Sawmill Creek (West Branch) passes through an open dense vegetated area in Darien, Illinois. West Branch flows under three structures upstream of the subject I-55 crossing. The first structure is a 3.5' diameter RCP culvert under a golf course access path, approximately 800' upstream of the subject structure. Approximately 150' downstream of the access drive is an old concrete weir, also located on the golf course. This structure was modeled as an inline weir in the regulatory WSP-2. Based on site survey and photographs, West Branch now completely bypasses the weir structure, which no longer functions as a weir. The old weir is now modeled as part of a cross section. Approximately 250' downstream of the old weir, West Branch flows through a 5' (W) X 4' (H) single box culvert crossing beneath North Frontage Road. Refer to Exhibit 4.1 for the general project location.

Downstream of I-55, the Creek begins to slightly meander through unincorporated DuPage County. The model extends an additional 1000' downstream of the subject structure via

surveyed cross sections and another 2000' via regulatory cross sections. Approximately 1000' downstream of the crossing West Branch merges with Wards Creek.

In general the floodplain is constantly comprised of densely vegetated floodplain with a well-defined open channel. Refer to Section 5 for photos of the floodplain and structures.

STRUCTURE DESCRIPTION

The structure carrying I-55 over West Branch Sawmill Creek was originally constructed as part of Project F.A.I. Route 3 Section 22-2 Project I-03-6(7), the construction of the multi-lane expressway currently referred to as I-55, in 1957. Historic plan excerpts are provided in Section 8.

The existing structure is a cast-in-place reinforced concrete box culvert designated as a special culvert. The overall length of the existing structure is shown to be 232' measured from face of headwall to face of headwall. The opening dimensions are 5'-0" wide x 4'-0" high.

The culvert is not skewed to the roadway and carries three (3) 12'-0" travel lanes, a 19-0" inside shoulder, and an 11'-0" outside shoulder in each direction of I-55. In addition, the culvert carries the adjacent South Frontage Road over West Branch. The frontage road is comprised of a 2-lane section with shoulders.

FLOODPLAIN DESCRIPTION

At the I-55 crossing, West Branch Sawmill Creek drains approximately 0.75 square miles of area and the watershed is comprised mainly of open land and residential land. The West Branch channel is found to be between 20' and 40' in width and has a fairly consistent cross section throughout the study limits. There is a mapped Federal Emergency Management Agency (FEMA) floodplain for West Branch, extending upstream and downstream of the subject crossing. There is no floodway at the I-55 crossing over West Branch, but upstream of the North Frontage Road there is regulatory floodway.

Downstream of I-55 and upstream of North Frontage Road, the West Branch floodplain is mapped as Zone AE by FEMA with defined base flood elevations. Between I-55 and North Frontage Road the floodplain is mapped as Zone A without defined base flood elevations. The Flood Insurance Rate Map (FIRM) Panels No. 17043C0908H and No. 17043C01002H for DuPage County, Illinois and Incorporated Areas, effective December 16, 2004 are included in Section 4 as Exhibit 4.3.

C. FIELD OBSERVATIONS

West Branch Sawmill Creek field survey was performed by CBBEL in December 2012. The stream banks are composed of some vegetation along with some exposed rocks. The streambed consists of exposed dirt, with very little rock or stone protecting the streambed from erosion. Refer to Section 5 for a Photograph Location Map and Photos.

Both upstream and downstream of the crossing the floodplain is comprised of dense brush, with a well-defined channel.

D. HISTORICAL OBSERVATIONS/RECORDS

There are no records of flooding on the I-55 pavement at the West Branch Sawmill Creek. However, pavement flooding was reported nearby at I-55 and Cass Avenue during the July 1990, June 1993, and June 1996 storm events. This flooding appears unrelated to West Branch. Pavement flooding records are included in Section 20.

The 1966 Hydrologic Investigations Atlas, HA-149 (Sag Bridge), prepared by the United States Geological Survey in cooperation with the Northeastern Illinois Metropolitan Area Planning Commission, does not have any flood profiles for West Branch. Therefore, there is no recorded all-time high profile for West Branch Sawmill Creek. Based on the HA-149 mapping, the historic 1961 flood did not overtop I-55, and based on contour intervals, the historic flood elevation is approximately 695 feet (NGVD 29). The HA is provided as Exhibit 4.2 in Section 4.

There are no current and functioning stream gages located in the project area. Stream gage USGS 05533400 SAWMILL CREEK NEAR LEMONT, IL is identified to be the only gage found on Sawmill Creek and is well outside of the project vicinity. The drainage area at the gage is 13.00 square miles, whereas the drainage area at the project location is 0.75 square miles.

The following documents were utilized in developing this report:

- *USGS Hydrologic Atlas HA-149, Sag Bridge* Quadrangle, Illinois, 1967.
- Flood Insurance Study for DuPage County, Illinois and Incorporated Areas, 17043CV000A, March 2007.
- Flood Insurance Rate Map for DuPage County, Illinois and Incorporated Areas, Panel No. 17043C0908H, effective December 16, 2004.
- Flood Insurance Rate Map for DuPage County, Illinois and Incorporated Areas, Panel No. 17043C1002H, effective December 16, 2004.

E. OTHER STUDIES & AFFECTED AGENCIES

The Federal Emergency Management Agency (FEMA) Flood Insurance Map (FIRM) numbers 17043C0908H and 17043C01002H for DuPage County, Illinois and Incorporated Areas encompass

the areas upstream and downstream of this crossing. According to these maps the surrounding area directly upstream of this culvert is mapped as Zone A Floodplain and the area downstream is mapped as a Zone AE Floodplain associated with Wards Creek. The FIRM has been provided as Exhibit 4.3.

The FEMA study WSP-2 hydraulic modeling was completed in the 1970s and did include the I-55 crossing on West Branch Sawmill Creek.

F. DATUM CORRELATION

A stream survey was conducted by CBBEL in winter of 2012 with cross sections taken along West Branch. These cross sections were used in the HEC-RAS existing conditions model. Exhibit 9-1 in Section 9 shows the cross section locations and topography along the entire length of the hydraulic modeling. The North American Vertical Datum 1988 (NAVD 88) was used as the basis for the CBBEL survey, topographic mapping, and the hydraulic models used in this report.

The FIS referenced in this report is in NAVD 88, however the original FEMA WSP-2 regulatory model cross-sections were in National Geodetic Vertical Datum of 1929 (NGVD 29). In order to use the information found in the FIS model, a conversion factor of -0.28 feet from NGVD 29 to NAVD 88 was applied. All elevations cited in this report and used in said models have been corrected for this factor. Datum conversion, from the NOAA VERTCON website calculations, have been provided in Section 18.

G. SENSITIVE FLOOD RECEPTORS

Based on the regulatory FEMA data, modeled floodplain, and topographic maps there do not appear to be any sensitive flood receptors upstream of the subject crossing.

H. HYDROLOGIC METHODOLOGY

The source hydrology and hydraulic model was taken from the current FEMA Flood Insurance Study (FIS) for DuPage County, No. 17403CV000H. The FEMA regulatory model titled “DARIEN FLOOD INSURANCE STUDY”, prepared by Harza Engineering Company (WSP2 format), dated 1977, is cited to be the underlying analysis referenced in the published FIS. The design discharges identified in the WSP2 model are the regulatory discharges correlated with the published FIS flows and are used as part of the analysis. The flows utilized in the model for West Branch are shown in the following table.

HEC-RAS Cross Section	Peak Discharge				
	10-Year	50-Year	100-Year	500-Year	OT
11	149	245	290	420	276
10	178	290	345	495	326
0.1	478	780	923	1290	871

Table H-1 Summary of Discharges

I. HYDRAULIC METHODOLOGY

The model titled "DARIEN FLOOD INSURANCE STUDY" as prepared by Harza Engineering Company (WSP-2 format), dated 1977, is considered to be the regulatory model. This model was used as the baseline information for this study, as well as the source of flows and starting water surface elevations. It should be noted that the published FIS study limits appear to be at the North Frontage Road, yet the source WSP-2 model extends downstream of this point. The published FIS profile does not include the crossing at I-55, but the WSP-2 model does.

A Table comparing the existing conditions water surface elevations between the published FIRM, the WSP-2 model, and the surveyed cross sections is provided at the beginning of Section 13.

The WSP-2 water surface elevations at cross section 0.1 located downstream of the confluence of West Branch with Wards Creek were originally used as the starting water surface elevations (WSEs) for this study. However, when using this location for the starting WSEs, the computed 100-year flood elevation upstream near surveyed cross section 1 was significantly lower than the mapped elevation shown on the FIRM. Therefore, a copy of cross section 1 (named cross section 0.15) was placed at the confluence of the West Branch Sawmill Creek with Wards Creek, and the starting water surface elevations were taken from the Wards Creek flood profile at the confluence. Only the 10- and 100-year flood elevations were published, so these were used to interpolate/extrapolate the 50- and 500-year WSEs. Using this location for the starting WSEs had a slight effect on the tailwater elevations at I-55, but no impact on the WSEs upstream of I-55. The FIS Wards Creek flood profiles and interpolation/extrapolation spreadsheet are provided at the beginning of Section 13.

The ineffective areas at the culverts use the standard ratio of 1:1 for contraction and a computed ratio of 2:1 for expansion based on the guidance in the HEC-RAS Hydraulic Reference Manual, Appendix B, given approximately b/B = 0.25, nob/nc = 1, and a slope shallower than 1'/mile. The expansion ratio of 2:1 is at the conservative end of the range. The applicable table from Appendix B is provided at the beginning of Section 13. Ineffective area limits were determined based on guidance found in Chapters 5 and 6 of the HEC-RAS Hydraulic Reference Manual.

The computed flood profiles go supercritical at surveyed cross section 2 and near critical at surveyed cross section 11. To allow the program to calculate both subcritical and supercritical profiles, the mixed flow regime was selected for computation. The upstream boundary conditions for the supercritical run were the known water surface elevations from the WSP-2 model at cross section 11.5.

An independent evaluation of Manning's 'n' roughness coefficient values for the channel and floodplain was completed for areas that appear to have changed since the FEMA model was prepared. Manning's n-values for the channel and adjacent floodplain were determined based on photographs, aerial photos, survey notes, and field observations. Base values for 'n' were adjusted using the FHWA methodology presented in Chapter 5 of the IDOT Drainage Manual, as follows:

$$n = (n_b + n_1 + n_2 + n_3 + n_4)*m.$$

Typical Channel

The typical main channel consists of a mixture of silt and light rocks, and has minor irregularities, alternates occasionally, negligible obstructions, small vegetation, and minor meandering. Therefore,

$$n = (0.025 + 0.005+ 0.003 + 0.004 + 0.005)*(1) = 0.042$$

Wooded Floodplain

The floodplain consisting of large overgrowth has minor irregularity, minor obstructions, and dense vegetation. Therefore,

$$n = (0.025+ 0.002+ 0 + 0.02 + 0.033)*(1) = 0.08$$

Paved Surface

The floodplain that consists of a paved surface, no overgrowth, has no irregularity, negligible obstructions, and no vegetation. Therefore,

$$n = (0.015+ 0.00+ 0.000 + 0.000 + 0.000)*(1) = 0.015$$

There are five (5) plans included in the HEC-RAS model submitted. A list of the plans, including whether they are used in the WIT, is provided below:

- FIS WSP2 conversion – This plan is a straight duplicate of the FIS WSP2 model in NGVD29. This plan was not used in the WIT.
- FIS WSP2 conversion NAVD88 – The FIS WPS2 conversion plan was converted to NAVD88 for comparison purposes.
- Existing CBBEL – This is the Existing plan, based on a combination of the FIS cross sections, the surveyed CBBEL cross sections, and using the starting WSE of the FIS model cross

section SMD03 approximately 2077' downstream in Wards Creek. It was not used in the WIT.

- Ex CBBEL Start WSEL– This plan was created to better represent the starting water surface elevations at the confluence of West Branch with Wards Creek. A copy of cross section 1, named cross section 0.15, was placed at the confluence. The starting water surface elevations were taken from the Wards Creek FIS flood profiles at the confluence with West Branch Sawmill Creek. This model was used as the existing conditions for the WIT.
- Natural CBBEL Start WSEL- The natural conditions plan used for the WIT based on Ex CBBEL Start WSEL.

J. SUMMARY OF EXISTING CONDITIONS HYDRAULIC ANALYSIS - DESIGN

The FEMA regulatory WSP2 model was duplicated in HEC-RAS (HEC-RAS Plan FIS WSP2 conversion), and converted to NAVD 88 datum (HEC-RAS Plan FIS WSP2 conversion NAVD88). A new HEC-RAS plan, titled Existing CBBEL, includes corrected reach lengths, updated roadway profiles, the surveyed creek cross sections, culvert geometry, and additional upstream bridges/culverts. Site investigation reveals that the old weir located between cross sections 7 and 8 has been bypassed by the West Branch and is no longer effective. It was previously modeled as a weir in the FIS WSP2. Based on site photos and survey, the creek has meandered its way around the weir. Therefore, the old weir is now modeled as part of standard cross section 7.5. The DuPage County 2' contour interval topographic mapping was used to extend the surveyed cross sections at certain locations. For the Existing CBBEL plan, three FIS cross sections remain in use, including the downstream starting cross section on Wards Creek. Other FIS cross sections were located near the faces of the structures, and were replaced by the newly surveyed cross sections. Comparison tables including the cross section names and locations, and calculated flood elevations, are provided in Section 13. For all modeled flood events, the updated flood profiles are higher than the FIS profiles. The locations of the surveyed cross sections and the FIS cross sections are shown on the Cross Section Location Map in Section 9. The plan Existing CBBEL is provided on the CD.

To better represent the starting water surfaces, elevations at the confluence of West Branch and Wards creeks were interpolated. A plan titled EX CBBEL Start WSEL was created using this starting water surface with an additional cross section 0.15, which is a duplicate of cross section 1 copied to the confluence. This plan EX CBBEL Start WSEL was used as the basis of the existing conditions plan for the WIT.

This independent HEC-RAS design analysis serves as the basis of the design and evaluation of the IDOT design criteria. No Permit model is necessary. HEC-RAS input and output for the EX CBBEL Start WSEL plan are provided in Section 13.B.

K. SUMMARY OF NATURAL CONDTIONS HYDRAULIC ANALYSIS - DESIGN

An independent HEC-RAS plan, titled Natural CBBEL Start WSEL, was created to reflect the natural profile of the stream. The geometry information for the culvert carrying I-55 and the ineffective areas of the upstream and downstream cross sections were removed from the Existing Conditions model in order to calculate the natural water elevations for the Waterway Information Table. The water surface elevations at the upstream face of the I-55 culvert are taken from HEC-RAS cross section 4, a surveyed cross section.

The input data and results of the HEC-RAS plan Natural CBBEL are provided in Section 13.C. Digital versions of these plans are also contained on the CD in Section 21.

L. PROPOSED STRUCTURE ANALYSIS

The proposed scope of the I-55 Managed Lanes project does not call for the reconstruction of the expressway and does not allow for the existing structure to be replaced as part of this project. No culvert repair recommendations were provided by IDOT, as the existing culvert is only 5' (W) x 4' (H). IDOT's Bureau of Maintenance does not inventory or inspect culverts of that size. Email correspondence regarding this finding is included in Section 20.

As there will be no change to the hydraulic characteristics of the culvert, no proposed structure hydraulic analysis is necessary. To meet the IDOT freeboard requirements, potential future improvements at this crossing include replacing the existing culvert with a larger structure, or providing an additional structure next to the existing culvert. See narrative Section P for further discussion on freeboard.

M. SCOUR ANALYSIS

As a concrete culvert with a concrete bottom, scour analysis for the structure is not required. According to the surveyed streambed profile, there is a scour hole present at the downstream end of the I-55 culvert. Also, site photos reveal that the existence of erosion behind the wingwall on the upstream side of the culvert. The results of the existing conditions plan show high outlet velocities from the culvert, 16 fps for the 10-year flood event. These high velocities contribute to the creation of the scour hole on the downstream side.

It is recommended that the embankment behind the wingwall on the upstream side be repaired and the affected area be armored with riprap or other such material. The condition of the wingwall and surrounding area should be monitored against continued erosion. On the downstream side, it is recommended that the scour hole be repaired and the channel armored

using scour countermeasures such as a lined apron or energy dissipation structure. The condition of the downstream channel should be monitored against continued scour.

N. COMPENSATORY STORAGE

West Branch Sawmill Creek has no regulatory floodway, and the tributary drainage area is under 1 square mile. No compensatory storage is required.

O. PERMIT REQUIREMENTS

Since the West Branch Sawmill Creek drainage area is under 1 square mile, no IDNR-OWR floodway construction permit is required.

P. FREEBOARD/CLEARANCE

The IDOT Drainage Manual dated July 2011 states that a flood frequency of 50 years should be used for design purposes. The 50-year Design High Water Elevation (HWE) is shown on the Waterway Information Table located in Section 2.

Freeboard is the distance from the Design HWE to the lowest edge of pavement of the roadway within the floodplain. IDOT freeboard policy requires a minimum freeboard distance of 3 feet. Since detailed roadway cross sections are not available, the DuPage County 2'-contour interval topographic mapping was used to determine the approximate low edge of pavement. The low edge of pavement is at approximately elevation 698.0, and the 50-year HWE is 697.62, providing only 0.38' of freeboard. Therefore, the roadway does not meet the IDOT criteria for freeboard.

The roadway also does not meet the IDOT criterion for overtopping. The existing I-55 overtopping elevation was determined from the existing southbound centerline profile provided by Stantec. The 100-year HWL is 698.4, while the overtopping elevation is 698.17, resulting in the roadway being overtopped for the 100-year event. The method used to determine the overtopping return period is as follows: Various discharges were iteratively input into HEC-RAS to determine the overtopping discharge of 302 cfs. Once the overtopping discharge was determined, it was input into a regression equation to determine its return frequency, which is calculated as the 52-year discharge as shown on the spreadsheet in Section 6. The overtopping elevation is closer to the 100-year elevation because once the water overtops the road, the flow spreads out across the approximately 250' wide sag and the elevation increases slowly per added discharge. The overtopping frequency year is listed as < 100 on the WIT is Section 2.

IDOT has no reported roadway flooding events at this location. The proposed scope of the I-55 Managed Lanes project does not allow for the existing structure to be replaced as part of this project. In order to meet the IDOT freeboard requirements without the need for a roadway profile adjustment, potential future improvements at this crossing include replacing the existing

culvert with a larger structure, or providing an additional structure next to the existing culvert. The existing structure causes a significant increase (8.0') in head for the 50 -year storm. Additional opening area is anticipated to reduce the created head which would help provide the required freeboard. It should be noted that if additional opening area is added to help with freeboard, the potential impacts downstream would have to be considered.

The IDOT requirement for 2' of clearance between the design natural HWL and the low beam elevation is not applicable to culverts. Therefore a clearance analysis was not performed.

Q. CONCLUSION

The existing condition hydraulic analysis concludes that the existing culvert carrying I-55 over the West Branch Sawmill Creek does not meet the IDOT requirements for design freeboard or overtopping. The proposed scope of the I-55 Managed Lanes project does not call for the reconstruction of the expressway and does not allow for the existing structure to be replaced as part of this project. Potential future improvements to meet IDOT requirements include structure replacement, or providing an additional structure next to the existing culvert.

No structural repairs to the culvert have been recommended at this time, as IDOT has not inspected the structure. Inspection is recommended. Installation of erosion protection and scour countermeasures are recommended at each end of the culvert. No floodway construction permit is required, as the drainage area to the site is less than 1 square mile.

WATERWAY INFORMATION TABLE BACK-UP CALCULATIONS

CALCULATE CREATED HEAD AND HEADWATER ELEVATION

Frequency	Natural H.W.E. (ft) [1]		Greatest Created Head Upstream of Culvert from Summary Tables (ft) [2]		Headwater Elevation at U/S Face of Structure (ft) [2A]	
	U/S Face of Structure	Approach Section (XS 4)	Existing	Proposed	Existing	Proposed
10-year	688.8	689.2	3.9	N/A	693.1	N/A
50-year	689.2	689.6	8.0	N/A	697.6	N/A
EXOT	689.3	689.6	8.6	N/A	698.2	N/A
100-year	689.4	689.8	8.6	N/A	698.4	N/A
500-year	689.8	690.2	8.4	N/A	698.6	N/A

1. The natural highwater elevation is the water surface elevation at the upstream side of the crossing as modeled in the stream natural condition, without the structure.

2. The created head is calculated at the cross section upstream of the bridge/culvert which has the greatest difference between the natural and proposed conditions. This method of calculating created head is only required for bridges and some major culvert crossings. Also, the preferred created head should never be negative.

2A. Headwater elevations = the natural highwater elevation + the created head. (In this case, the I-55 culvert creates a level pool situation upstream. To accurately reflect the headwater elevations, the headwater elevation is calculated as the natural H.W.E. @ approach section XS 4 + the created head.)

CALCULATE FREEBOARD AND CLEARANCE

Low Road Elevation (ft) [3]

HYDRAULIC REPORT DATA SHEETS AND CHECKLIST

Illinois Department of Transportation

Hydraulic Report Data Sheets

Route	Interstate 55	P or D #	P-91-762-10
Section	I-355 to I-94	PTB #	158-002
County	DuPage		
Exist SN	n/a		
Prop SN	n/a		

General Information

1. Name of the Stream: West Branch Sawmill Creek

2. Location of the Structure: NW ¼ of the NE ¼ of Section 34, Township 37N, Range 11E of the 4 P.M.

3. Hydraulic Report Prepared By: ☒ Consultant Christopher B. Burke Engineering, Ltd.
☐ District

4. Hydraulic Report Approval Authority: ☒ District – Post PDF of HR to BBS Hydraulics SharePoint Server
☐ BBS Hydraulics - Submit 2 hard copies of HR to BBS Hydraulics

Site Design Data

5. Drainage Area (sq. mi.): 0.75

6. Highway Classification:
☐ Rural ☒ Principal Arterial
☒ Urban ☐ Minor Arterial
☐ Other ☐ Collector
☐ Local

7. Design Frequency: ☐ 30 yr ☒ 50 Yr. ☐ Other

8. Number of Waterway Information Tables (WIT): 1
If more than one, explain:
The FIS model included the subject structure. The WIT is for the design model incorporating current survey into the FIS model.

Hydrologic & Hydraulic Analysis

9. Hydrology Modeling (check all that apply): ☐ USGS/Stream Stats ☒ FIS ☐ Gage Data
☐ Other

10. Hydraulic Modeling (check all that apply):
a. Method: ☒ HEC-RAS ☐ WSPRO ☐ Other
b. Manning's "n" values determined as per IDOT DM CH.5? ☒ Yes ☐ No
If no, explain:
c. Source of Starting WSE: FIS
d. Non- IDOT encroachments in Survey? ☒ Yes ☐ No
If yes, are they accounted for? ☒ Yes ☐ No
e. Does the Tailwater Control? ☐ Yes ☒ No
If yes, list:

f. Were the Expansion/Contraction cones properly addressed? ☒ Yes ☐ No ☐ N/A
If No or N/A, explain:

g. What Expansion and Contraction Rates were used? Expansion: 2 (X:1)
Contraction 1 (X:1)

IDNR – OWR Floodway Permit

11. Is area experiencing urbanization or expected to urbanize within 10 years? ☒ Yes ☐ No

12. Are there any sensitive flood receptors located upstream within possible backwater influence? ☐ Yes ☒ No
If yes, list and describe critical upstream flood damageable properties and their elevations.

13. Is there any History of Flooding or Overtopping problems? ☐ Yes ☒ No
Sources of Observed Highwater:
September 1961 HWL estimated at approximately 695 (NGVD 29) from Hydrologic Investigations Atlas for Sag Bridge Quadrangle, 1966.

14. Is the structure hydraulically connected to or within the floodway of an IDNR-OWR designated Public Body of Water? ☐ Yes ☒ No

15. Required IDNR - OWR Permit type:
☐ Individual ☐ SWP #2 ☐ SWP #12 ☐ Floodway
☒ None ☐ Other

Proposed Structure Data

16. Project Scope (check all that apply): Existing culvert to remain.
a. ☐ Complete Replacement
b. ☐ Superstructure Replacement
c: ☐ Superstructure Widening; Length of Pier Extension in the water:
U/S D/S
d. ☐ Bridge ☒Culvert
e. ☐ New Alignment
f. Work Planned Below Q_{100} HWE? ☒ Yes ☐ No Minor repairs recommended.
g. ☐ Profile Raise

17. If a bridge is proposed, supply:
Flow line elevation (ft): Abutment type:
Preliminary low beam elevation (ft): Skew (degrees):
Width of deck (ft): Number of spans:
Total length from face to face of abutment (ft)

18. If a culvert is proposed, supply:
Type and size: Length (ft):
Upstream invert elevation (ft): Entrance type:
Downstream invert elevation (ft): Skew (degrees):
Note: Upstream and downstream elevations should reflect the elevations before the 3" drop is applied

19. If a three-sided structure is proposed, supply:
Flow line elevation (ft): Skew (degrees):
Span (ft): Length (ft):
Height (ft): Number of spans:

20. a. Is the IDOT Clearance Policy Met? ☐ Yes ☐ No ☒ NA Value (ft): N/A
b. Is the IDOT Freeboard Policy Met? ☐ Yes ☒ No ☐ NA Value (ft): 0.38'

21. Type of streambed soil : ☐ Clay ☒ Silt ☐ Sand ☐ Loam ☐

22. Scour/ Migration Problems: ☐ None/Minimal ☒ Significant ☐ Severe
Comments: Scour holes at upstream (1.0') and downstream (2.0') ends of culvert.

Ice Concerns: ☒ None/Minimal ☐ Significant ☐ Severe
Comments:

Debris Concerns: ☒ None/Minimal ☐ Significant ☐ Severe
Comments:

Countermeasures Proposed: Repair upstream embankment erosion, install scour countermeasures.

Existing Structure Data

		N. Frontage Road Structure U/S	Interstate 55 Subject Structure	Confluence With Wards Creek
23.	Distance from proposed structure: (ft.)	240	0.	1000'
24.	Type of structure:	5'x4' RCBC	5'x4' RCBC	No Structure
25.	Low beam elevation:	N/A	N/A	No Structure
26.	Flow line elevation:	694.97	686.93	~676
27.	Maximum known high water elevation:	~695	~695	~675
28.	Date of maximum high water:	Sept. 1961	Sept. 1961	Sept. 1961
29.	Cause (backwater, headwater, etc.):	N/A	N/A	N/A
30.	Does structure carry entire design flood flow?	☒ Yes ☐ No	☒ Yes ☐ No	☐ Yes ☐ No
	If not, state area of additional waterway opening: (ft^2)	N/A	N/A	No Structure
31.	Type and size of existing overflow structures:	N/A	N/A	No Structure
32.	Has adverse scour occurred under or adjacent to the structure?	Yes	Yes	No Structure
33.	Classify type of scour and/or aggradation / degradation:	Culvert I/O Velocity	Culvert I/O Velocity	No Structure

Required Additional Data

34. Deviations from the General Procedures presented in IDOT DM CH. 2, CH.6, and CH.7:
N/A

35. Information regarding high water from other streams, reservoirs, flood control projects, proposed channel changes, or other controls affecting proposed waterway area:
N/A

36. Site Inspection made by: Christopher B Burke Engineering Ltd Date: November 2013

Remarks:
Inspected by Edmund Burke.

37. Prepared by: Edmund M. Burke Date August 5, 2016

Signed (QA/QC):  Date August 25, 2016

Hydraulic Report Checklist

The District or Consultant should complete the following checklist before submitting the Hydraulic Report for approval.

1. ☒ Title Page
2. ☒ Table of Contents
3. ☒ Narrative - (as outlined in Section 2-601.01 Item #3)
4. ☒ Waterway Information Table (WIT) - (as outlined in Section 2-601.01 Item #4)
5. ☒ Hydraulic Report Data Sheets
6. ☒ Location Map - should show the subject structure along with nearby location defining landmarks (cities, roads, highways, etc.)
7. ☒ USGS Hydraulic Investigation Map (District 1 only)
8. ☒ Photographs - (Minimum: U/S & D/S Structure Faces, Up & Down Channel, Up & Down Roadway Across Structure)
9. ☒ Hydrology (map and calculations)
10. ☒ Streambed Profile
11. ☒ Roadway Profile (existing and proposed)
12. ☒ Cross Section Plots - with plan layout preferably overlayed upon an aerial photo with the contours
13. ☒ Bridge Opening Plots
14. ☒ Natural Condition Analysis
15. ☒ Existing Condition Analysis
16. ☐ Proposed Condition Analysis

When HEC-RAS modeling is being used, ALL Plans (Natural, Existing, & Proposed) shall be included in ONE Project File.

17. ☐ Scour Analysis – Existing and Proposed Conditions
18. ☐ Compensatory Storage Calculations (if required)
19. ☒ Survey Notes (if available, No Electronic Point Files)
20. ☒ Correspondence Notes
21. ☒ CD with Project Files (Include pdf copy of the Hydraulic Report)

NOTICE TO
FLOOD INSURANCE STUDY USERS

Communities participating in the National Flood Insurance Program have established repositories of flood hazard data for floodplain management and flood insurance purposes. This Flood Insurance Study (FIS) may not contain all data available within the repository. It is advisable to contact the community repository for any additional data.

Part or all of this FIS may be revised and republished at any time. In addition, part of this FIS may be revised by the Letter of Map Revision process, which does not involve republication or redistribution of the FIS. It is, therefore, the responsibility of the user to consult with community officials and to check the community repository to obtain the most current FIS components.

Initial Countywide FIS Effective Date: December 4, 1985
Revised Countywide FIS Date: June 16, 2004

- near Bay View	0.42	146	238	285	402

3.6.1.3 Hydraulic Analysis

Analysis of the hydraulic characteristics of flooding from the sources studied was carried out to provide estimates of the elevations of floods of the selected recurrence intervals.

Channel cross-section data were obtained from field surveys. All bridges and culverts were surveyed to obtain elevation data and structural geometry

Locations of selected cross-sections used in the hydraulic analysis are shown on the Flood Profiles and on the Flood Insurance Rate Map.

The water-surface elevations for the streams studied in detail and limited detail were computed using either the SCS WSP-2 backwater computer program or the USACE HEC-2 step-backwater computer program (U.S. Department of Agriculture, 1974; USACE, HEC-2 Water-Surface Profiles, Computer Program723-X6-L202A, 1973). The USACE HEC-2 model was used for all streams studied in detail and limited detail except for Meacham Creek, Sawmill Creek, Salt Creek, Spring Brook, and Westwood Creek, which were modeled utilizing the SCS WSP-2 program (U.S. Department of Agriculture, 1974).

Stream cross-sections and bridge sections for East Branch Sawmill Creek, Sawmill Creek, and West Branch Sawmill Creek were surveyed using land survey techniques. All of the cross sections on Sawmill Creek and the cross sections downstream from 75th Street on East Branch Sawmill Creek were surveyed by the SCS; upstream sections were surveyed by Harza. All sections on West Branch Sawmill Creek were surveyed by Harza.

Water-surface elevations for floods of the selected recurrence intervals were computed using hydraulic models for East Branch Sawmill Creek and Sawmill Creek prepared by the SCS (Des Plaines River Watershed

TABLE 5

FEDERAL EMERGENCY MANAGEMENT AGENCY

DUPAGE COUNTY

AND INCORPORATED AREAS

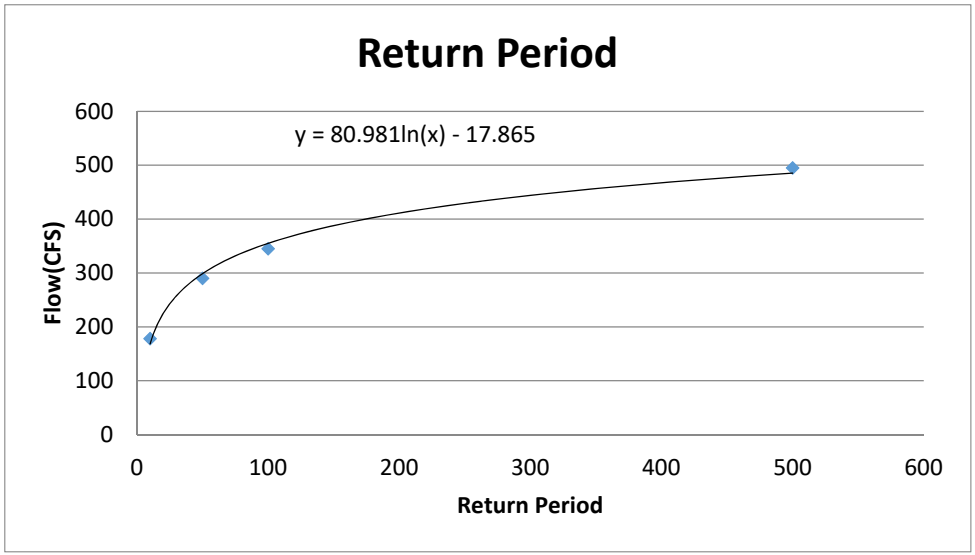
FLOODWAY DATA

WEST BRANCH SAWMILL CREEK (SWSW)

Regression Equation - Solve for 2 year Q for WSAS1C and OVT
I-55 over West Branch Sawmill Creek

Input Data	
Return Period	Actual Q
10	178
50	290
100	345
500	495

Calculated Data			
Return Period	Actual Q	Calculated Q	
2	-	38	
10	178	169	
50	290	299	
100	345	355	
500	495	485	
52	-	302	OVT



NOTES:

Overtopping flow of 302 cfs determined from HEC-RAS by iteration.

By Excel Trendline calculation, x = return period in years, y = flow in cfs: 80.981 ln (52) - 17.865 = 302.

Therefore, overtopping return period = 52 years.

Expansion Reach Lengths

In some types of studies, a high level of sophistication in the evaluation of the transition reach lengths is not justified. For such studies, and for a starting point in more detailed studies, Table B-2 offers ranges of expansion ratios, which can be used for different degrees of constriction, different slopes, and different ratios of overbank roughness to main channel roughness. Once an expansion ratio is selected, the distance to the downstream end of the expansion reach (the distance Le on Figure B-1) is found by multiplying the expansion ratio by the average obstruction length (the average of the distances A to B and C to D from Figure B-1). The average obstruction length is half of the total reduction in floodplain width caused by the two bridge approach embankments. In Table B-2, b/B is the ratio of the bridge opening width to the total floodplain width, nob is the Manning n value for the overbank, nc is the n value for the main channel, and S is the longitudinal slope. The values in the interior of the table are the ranges of the expansion ratio. For each range, the higher value is typically associated with a higher discharge.

Table B-2 Ranges of Expansion Ratios

		nob / nc = 1	nob / nc = 2	nob / nc = 4
b/B = 0.10	S = 1 ft/mile	1.4 – 3.6	1.3 – 3.0	1.2 – 2.1
	5 ft/mile	1.0 – 2.5	0.8 – 2.0	0.8 – 2.0
	10 ft/mile	1.0 – 2.2	0.8 – 2.0	0.8 – 2.0
b/B = 0.25	S = 1 ft/mile	1.6 – 3.0	1.4 – 2.5	1.2 – 2.0
	5 ft/mile	1.5 – 2.5	1.3 – 2.0	1.3 – 2.0
	10 ft/mile	1.5 – 2.0	1.3 – 2.0	1.3 – 2.0
b/B = 0.50	S = 1 ft/mile	1.4 – 2.6	1.3 – 1.9	1.2 – 1.4
	5 ft/mile	1.3 – 2.1	1.2 – 1.6	1.0 – 1.4
	10 ft/mile	1.3 – 2.0	1.2 – 1.5	1.0 – 1.4

The ranges in Table B-2, as well as the ranges of other parameters to be presented later in this appendix, capture the ranges of the idealized model data from this study. Another way of establishing reasonable ranges would be to compute statistical confidence limits (such as 95% confidence limits) for the regression equations. Confidence limits in multiple linear regression equations have a different value for every combination of values of the independent variables (Haan, 1977). The computation of these limits entails much more work and has a more restricted range of applicability than the corresponding limits for a regression, which is based on only one independent variable. The confidence limits were, therefore, not computed in this study.

Extrapolation of expansion ratios for constriction ratios, slopes or roughness ratios outside of the ranges used in this table should be done with care. The expansion ratio should not exceed 4:1, nor

PROJECT DATA
Project Title: WBrSawCr
Project File : WBrSawCr.prj
Run Date and Time: 9/9/2016 3:17:30 PM

Project in English units

Project Description:
2016 CBBEL model for I-55 over Sawmill Creek.

PLAN DATA

Plan Title: Ex CBBEL Start WSEL
Plan File : n:\Idot\110203.00001\Drain\Model\HEC-RAS 5.0.1\W BR Sawmill Ck\WBrSawCr.p06

Geometry Title: Mod Ex Start WSEL
Geometry File : n:\Idot\110203.00001\Drain\Model\HEC-RAS 5.0.1\W BR Sawmill Ck\WBrSawCr.g06

Flow Title : Ex CBBEL Start WSEL
Flow File : n:\Idot\110203.00001\Drain\Model\HEC-RAS 5.0.1\W BR Sawmill Ck\WBrSawCr.f03

Plan Description:
Existing conditions of I-55 over West Branch of Sawmill Creek. Created from
2012 CBBEL survey Cross sections, structures, and select FIS cross sections.
Starting water surface and flows from FIS profile near confluence with Wards
Creek. Proper ineffective cones and expansion/contraction coefficients used.
All elevations presented in NAVD 88.

Plan Summary Information:

Number of:	Cross Sections	= 15	Multiple Openings	=	0
	Culverts	= 3	Inline Structures	=	0
	Bridges	= 0	Lateral Structures	=	0

Computational Information

Water surface calculation tolerance	= 0.01
Critical depth calculation tolerance	= 0.01
Maximum number of iterations	= 20
Maximum difference tolerance	= 0.3
Flow tolerance factor	= 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

Errors Warnings and Notes for Plan : Ex Start WSEL

Location:	River: W. Br. Sawmill Reach: I-55 RS: 11.5 Profile: 10-yr
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 11 Profile: 10-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 10 Profile: 10-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9.1 Profile: 10-yr
Warning:	The flow through the culvert is supercritical. However, since there is flow over the road (weir
	flow), the program cannot determine if the downstream cross section should be subcritical or
	supercritical. The program used the downstream subcritical answer, even though it may not be
	valid.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9.1 Profile: 10-yr Culv: Access Road
Warning:	During the supercritical analysis, the program could not converge on a supercritical answer in the
	downstream cross section. The program used the solution with the least error.
Note:	The flow in the culvert is entirely supercritical.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9 Profile: 10-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 8 Profile: 10-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7.5 Profile: 10-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Manning's n values were composited to a single value in the main channel.
Note:	Hydraulic jump has occurred between this cross section and the previous upstream section.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7 Profile: 10-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 6 Profile: 10-yr

Errors Warnings and Notes for Plan : Ex Start WSEL (Continued)

Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 10-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Note:	During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 10-yr Culv: Cul Frontage
Warning:	During the supercritical analysis, the program could not converge on a supercritical answer in the
	downstream cross section. The program used the solution with the least error.
Note:	The flow in the culvert is entirely supercritical.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5 Profile: 10-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 4 Profile: 10-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3.1 Profile: 10-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Note:	During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3.1 Profile: 10-yr Culv: Culv # 1
Warning:	During the supercritical analysis, the program could not converge on a supercritical answer in the
	downstream cross section. The program used the solution with the least error.
Note:	The flow in the culvert is entirely supercritical.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3 Profile: 10-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 2 Profile: 10-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	Divided flow computed for this cross-section.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 1 Profile: 10-yr
Note:	Hydraulic jump has occurred between this cross section and the previous upstream section.

Errors Warnings and Notes for Plan : Ex Start WSEL

Location:	River: W. Br. Sawmill Reach: I-55 RS: 11.5 Profile: 50-yr
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 11 Profile: 50-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 10 Profile: 50-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9.1 Profile: 50-yr
Warning:	The flow through the culvert is supercritical. However, since there is flow over the road (weir
	flow), the program cannot determine if the downstream cross section should be subcritical or
	supercritical. The program used the downstream subcritical answer, even though it may not be
	valid.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9.1 Profile: 50-yr Culv: Access Road
Warning:	During the supercritical analysis, the program could not converge on a supercritical answer in the
	downstream cross section. The program used the solution with the least error.
Note:	The flow in the culvert is entirely supercritical.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9 Profile: 50-yr
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 8 Profile: 50-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7.5 Profile: 50-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Manning's n values were composited to a single value in the main channel.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7 Profile: 50-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 6 Profile: 50-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 50-yr Culv: Cul Frontage
Note:	Culvert critical depth exceeds the height of the culvert.
Note:	During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note:	The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore,

Errors Warnings and Notes for Plan : Ex Start WSEL (Continued)

	the culvert inlet equations are not valid and the supercritical result has been discarded. The outlet
	answer will be used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5 Profile: 50-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 4 Profile: 50-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3.1 Profile: 50-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Note:	During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3.1 Profile: 50-yr Culv: Culv # 1
Warning:	During the supercritical analysis, the program could not converge on a supercritical answer in the
	downstream cross section. The program used the solution with the least error.
Note:	Culvert critical depth exceeds the height of the culvert.
Note:	The flow in the culvert is entirely supercritical.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3 Profile: 50-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 2 Profile: 50-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	Divided flow computed for this cross-section.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 1 Profile: 50-yr
Note:	Hydraulic jump has occurred between this cross section and the previous upstream section.

Errors Warnings and Notes for Plan : Ex Start WSEL

Location:	River: W. Br. Sawmill Reach: I-55 RS: 11.5 Profile: 100-yr
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 11 Profile: 100-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 10.5 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 10 Profile: 100-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 8 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7.5 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Manning's n values were composited to a single value in the main channel.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 6 Profile: 100-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 100-yr Culv: Cul Frontage
Note:	Culvert critical depth exceeds the height of the culvert.
Note:	During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note:	The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore,
	the culvert inlet equations are not valid and the supercritical result has been discarded. The outlet
	answer will be used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water

Errors Warnings and Notes for Plan : Ex Start WSEL (Continued)

	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 4 Profile: 100-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3.1 Profile: 100-yr
Warning:	The flow through the culvert is supercritical. However, since there is flow over the road (weir
	flow), the program cannot determine if the downstream cross section should be subcritical or
	supercritical. The program used the downstream subcritical answer, even though it may not be
	valid.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3.1 Profile: 100-yr Culv: Culv # 1
Warning:	During the supercritical analysis, the program could not converge on a supercritical answer in the
	downstream cross section. The program used the solution with the least error.
Note:	Culvert critical depth exceeds the height of the culvert.
Note:	The flow in the culvert is entirely supercritical.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 2 Profile: 100-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	Divided flow computed for this cross-section.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 1 Profile: 100-yr
Note:	Hydraulic jump has occurred between this cross section and the previous upstream section.

Project Description:
2016 CBBEL model for I-55 over Sawmill Creek.

PLAN DATA

Plan Title: Natural CBBEL Start WSEL
Plan File : n:\Idot\110203.00001\Drain\Model\HEC-RAS 5.0.1\W BR Sawmill Ck\WBrSawCr.p07

Geometry Title: Natural Start WSEL
Geometry File : n:\Idot\110203.00001\Drain\Model\HEC-RAS 5.0.1\W BR Sawmill Ck\WBrSawCr.g07

Flow Title : Ex CBBEL Start WSEL
Flow File : n:\Idot\110203.00001\Drain\Model\HEC-RAS 5.0.1\W BR Sawmill Ck\WBrSawCr.f03

Plan Description:
Natural conditions of I-55 over West Branch of Sawmill Creek. Created from 2012 CBBEL survey Cross sections, structures, and select FIS cross sections. Starting water surface and flows from FIS profile near confluence with Wards Creek. Proper ineffective cones and expansion/contraction coefficients used. All elevations presented in NAVD 88.

Plan Summary Information:

Number of:	Cross Sections	= 15	Multiple Openings	=	0
	Culverts	= 2	Inline Structures	=	0
	Bridges	= 0	Lateral Structures	=	0

Computational Information

Water surface calculation tolerance	= 0.01
Critical depth calculation tolerance	= 0.01
Maximum number of iterations	= 20
Maximum difference tolerance	= 0.3
Flow tolerance factor	= 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

Errors Warnings and Notes for Plan : Nat Start WSEL

Location:	River: W. Br. Sawmill Reach: I-55 RS: 11.5 Profile: 10-yr
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 11 Profile: 10-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 10 Profile: 10-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9.1 Profile: 10-yr
Warning:	The flow through the culvert is supercritical. However, since there is flow over the road (weir
	flow), the program cannot determine if the downstream cross section should be subcritical or
	supercritical. The program used the downstream subcritical answer, even though it may not be
	valid.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9.1 Profile: 10-yr Culv: Access Road
Warning:	During the supercritical analysis, the program could not converge on a supercritical answer in the
	downstream cross section. The program used the solution with the least error.
Note:	The flow in the culvert is entirely supercritical.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9 Profile: 10-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 8 Profile: 10-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7.5 Profile: 10-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Manning's n values were composited to a single value in the main channel.
Note:	Hydraulic jump has occurred between this cross section and the previous upstream section.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7 Profile: 10-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 6 Profile: 10-yr

Errors Warnings and Notes for Plan : Nat Start WSEL (Continued)

Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 10-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Note:	During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 10-yr Culv: Cul Frontage
Warning:	During the supercritical analysis, the program could not converge on a supercritical answer in the
	downstream cross section. The program used the solution with the least error.
Note:	The flow in the culvert is entirely supercritical.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5 Profile: 10-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 4 Profile: 10-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy
	was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3 Profile: 10-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Hydraulic jump has occurred between this cross section and the previous upstream section.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 2 Profile: 10-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	Divided flow computed for this cross-section.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.

Errors Warnings and Notes for Plan : Nat Start WSEL

Location:	River: W. Br. Sawmill Reach: I-55 RS: 11.5 Profile: 50-yr
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 11 Profile: 50-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 10 Profile: 50-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9.1 Profile: 50-yr Culv: Access Road
Note:	During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note:	The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore,
	the culvert inlet equations are not valid and the supercritical result has been discarded. The outlet
	answer will be used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9 Profile: 50-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 8 Profile: 50-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7.5 Profile: 50-yr
Note:	Manning's n values were composited to a single value in the main channel.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7 Profile: 50-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 6 Profile: 50-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 50-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Note:	During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 50-yr Culv: Cul Frontage
Warning:	During the supercritical analysis, the program could not converge on a supercritical answer in the
	downstream cross section. The program used the solution with the least error.
Note:	Culvert critical depth exceeds the height of the culvert.
Note:	The flow in the culvert is entirely supercritical.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5 Profile: 50-yr

Errors Warnings and Notes for Plan : Nat Start WSEL (Continued)

Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 4 Profile: 50-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy
	was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3 Profile: 50-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Hydraulic jump has occurred between this cross section and the previous upstream section.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 2 Profile: 50-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	Divided flow computed for this cross-section.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.

Errors Warnings and Notes for Plan : Nat Start WSEL

Location:	River: W. Br. Sawmill Reach: I-55 RS: 11.5 Profile: 100-yr
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 11 Profile: 100-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 10.5 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 10 Profile: 100-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 8 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7.5 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Manning's n values were composited to a single value in the main channel.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 6 Profile: 100-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 100-yr
Warning:	The flow through the culvert is supercritical. However, since there is flow over the road (weir
	flow), the program cannot determine if the downstream cross section should be subcritical or
	supercritical. The program used the downstream subcritical answer, even though it may not be
	valid.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 100-yr Culv: Cul Frontage
Warning:	During the supercritical analysis, the program could not converge on a supercritical answer in the
	downstream cross section. The program used the solution with the least error.
Warning:	During the culvert outlet control computations, the program could not balance the culvert/weir
	flow. The reported outlet energy grade answer may not be valid.

Errors Warnings and Notes for Plan : Nat Start WSEL (Continued)

Note:	Culvert critical depth exceeds the height of the culvert.
Note:	The flow in the culvert is entirely supercritical.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 4 Profile: 100-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, energy
	was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 3 Profile: 100-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Note:	Hydraulic jump has occurred between this cross section and the previous upstream section.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 2 Profile: 100-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	Divided flow computed for this cross-section.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.

Errors Warnings and Notes for Plan : Nat Start WSEL

Location:	River: W. Br. Sawmill Reach: I-55 RS: 11.5 Profile: 500-yr
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 11 Profile: 500-yr
Warning:	The energy equation could not be balanced within the specified number of iterations. The program
	used critical depth for the water surface and continued on with the calculations.
Warning:	The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for
	additional cross sections.
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Warning:	The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section.
	This may indicate the need for additional cross sections.
Warning:	During the standard step iterations, when the assumed water surface was set equal to critical
	depth, the calculated water surface came back below critical depth. This indicates that there is not
	a valid subcritical answer. The program defaulted to critical depth.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 10.5 Profile: 500-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 10 Profile: 500-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 9 Profile: 500-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 8 Profile: 500-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7.5 Profile: 500-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Note:	Manning's n values were composited to a single value in the main channel.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 7 Profile: 500-yr
Warning:	The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7
	or greater than 1.4. This may indicate the need for additional cross sections.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 6 Profile: 500-yr
Note:	Multiple critical depths were found at this location. The critical depth with the lowest, valid, water
	surface was used.
Location:	River: W. Br. Sawmill Reach: I-55 RS: 5.1 Profile: 500-yr
Warning:	The flow through the culvert is supercritical. However, since there is flow over the road (weir
	flow), the program cannot determine if the downstream cross section should be subcritical or
	supercritical. The program used the downstream subcritical answer, even though it may not be
	valid.

John O',

The Bureau of Maintenance is recommending repairs based on the inspections of the three structures listed below. The West Branch Sawmill Creek is a 5'X4' culvert and BOM does not inventory or inspect culverts of that size. Let me know if you need any other information.

Thanks,

Corey Smith

Subject: RE: I-55 culvert conditions

Hello Corey,

A quick question, any reason you asked about the below structures, but not 022-0514, which also carries I-55 in this area?

I've scanned and attached recent inspection reports for 022-0516, 022-0207, and 022-0513. I also included scanned plans for 022-0516, 022-0207, and a coring report for 022-0513.

Full size copies of inspection photos are located in the Pontis directory, which you should be able to access if you have access to SIMS: \\central\co\pontis\

For the structure you call out as:

No SN I-55 over West Branch Sawmill Creek

I'm not sure where exactly this is. Can you give me an exact location? Also, do you happen to know what size structure it is?

Reviewing the conditions based on our recent inspecitons, here's my take on reasonable scopes of work:

022-0516 - culvert repairs, including full depth patching at the construction joints, dumped rip rap in areas of erosion in channel

022-0207 - culvert repairs, including full depth patching at the construction joints

022-0513 - culvert repairs, including full depth patching at the construction joints, dumped rip rap in areas of erosion in channel

Steve

Steve - please pull this information together and send your thoughts on the need for replacement / repairs to Corey, with a cc to me.

Thanks.

Subject: I-55 culvert conditions

Sarah,

Could you please let us know the condition and provide the inspection reports for the following structures:

022-0516 I-55 over Wards Creek
022-0207 I-55 over Sawmill Creek
022-0513 I-55 over East Branch Sawmill Creek No SN I-55 over West Branch Sawmill Creek

We would like to find out if they need to be replaced as part of the I-55 Managed Lane project.

Thanks,

Corey Smith
