Context Sensitive Solutions (CSS)

Context Sensitive Solutions (CSS) is an interdisciplinary approach that seeks effective, multi-modal transportation solutions by working with stakeholders to develop, build, and maintain cost-effective transportation facilities which fit into and reflect the project's surroundings – its "context."

CSS seeks answers to transportation problems through early, frequent, and meaningful communication with stakeholders and a flexible and creative approach to design. The resulting projects should improve safety and mobility for the traveling public, while seeking to preserve and enhance the scenic, economic, historic, and natural qualities of the settings through which they pass.
