

## 2024-2026 Highway Safety Performance Measures

The goals developed were determined using several databases and were established for the various program priority areas (e.g., impaired driving, occupant protection, pedestrian, and motorcycle). Specific thresholds and target dates were set based on past trends. The main exposure data item that was used in this process is Vehicle Miles Traveled (VMT). The highway safety performance measures are intended to be an overall measure of the effectiveness of the State's Highway Safety Plan.
